

## **BAB V**

### **KESIMPULAN DAN SARAN**

#### **5.1 Kesimpulan**

Berdasarkan percobaan yang telah dilakukan, dapat disimpulkan bahwa:

1. Hubungan antara variasi jumlah kebutuhan air bersih dan *service time* adsorben yang disajikan pada **Tabel 4.7**, dapat digunakan untuk memperkirakan waktu penggantian adsorben dalam kolom adsorpsi yang telah terdapat di sebuah rumah tangga, dan sebaliknya.
2. Semakin lama *service time*, maka semakin besar tinggi unggul, diameter kolom, dan panjang kolom yang dibutuhkan.
3. Semakin besar jumlah kebutuhan air bersih, maka semakin besar tinggi unggul, diameter kolom, dan panjang kolom yang dibutuhkan.

#### **5.2 Saran**

Adapun saran untuk penelitian kedepannya:

1. Perlu dilakukan percobaan karakterisasi adsorben terlebih dahulu untuk adsorben yang akan digunakan, agar hasil yang didapatkan lebih akurat.
2. Perlu dilakukan percobaan adsorpsi kontinu skala laboratorium terlebih dahulu menggunakan air yang akan diolah, agar hasil yang didapatkan lebih akurat.
3. Perlu dilakukan penelitian lebih lanjut dengan variasi variabel percobaan lainnya seperti penggunaan air yang mengandung konsentrasi lebih tinggi.
