

## BAB V KESIMPULAN DAN SARAN

### 5.1 Kesimpulan

1. Konsentrasi larutan pemasak yang terdiri atas alkali aktif (22 dan 28% <sup>b</sup>/<sub>b</sub>) dan sulfiditas (24 dan 32% <sup>b</sup>/<sub>b</sub>) memberikan pengaruh yang tidak signifikan terhadap penurunan kadar lignin.
2. Waktu pemasakan (2 dan 3 jam) memberikan pengaruh yang tidak signifikan terhadap penurunan kadar lignin.
3. Rasio F:S tidak memberikan pengaruh terhadap penurunan kadar lignin.
4. Berdasarkan hasil penelitian, buah bintaro memiliki potensi untuk dijadikan bahan baku kertas karton.
5. Dari hasil pengamatan, seluruh perlakuan menghasilkan penurunan kadar lignin sebesar  $\pm 90\%$  (88-93%).

### 5.2 Saran

1. Oleh karena tidak ada pengaruh signifikan dalam perlakuan yang diuji, untuk selanjutnya perlu dilakukan penelitian terhadap perlakuan optimal yang memberikan harga terbaik untuk pengolahan buah bintaro sebagai bahan baku bubur kertas.
2. Perlu dilakukan diteliti lebih lanjut pengaruh berbagai jenis proses pembuatan bubur kertas yaitu proses mekanis, kimia-mekanis, dan semi kimia.
3. Perlu adanya penelitian pengaruh umur buah bintaro terhadap kualitas bubur kertas yang dihasilkan.
