**UCLA University Distinguished Professor**

**Edward Carter Chair in Business Administration**

**UCLA Anderson School**

#### **Title: Making Supply Chain Transparent for a Better World: Information and Analysis**

**Abstract:** Companies are gaining more supply chain visibility to reduce their supply chain risks, but few are disclosing what they know with the public. Should a firm disclose its supply chain information to the public? What are the risks and opportunities? I plan to present some recent research and case-based studies to illustrate how supply chain transparency can improve our world: planet, people and profit.

**About the speaker:** Dr. Tang is a University Distinguished Professor and the holder of the Edward W. Carter Chair in Business Administration at the UCLA Anderson School of Management. He served as Dean at the NUS Business School, and as Senior Associate Dean at the UCLA Anderson School.

Known as a world renowned thought leader in global supply chain management who has published over 130 research articles and 6 books, Chris consulted with over 10 international companies including HP and IBM, taught courses at various universities including Stanford and UC Berkeley; and delivered over 200 keynote speeches and seminars.

Dr. Tang is a fellow of Institute of Operations and Management Sciences (INFORMS), Production and Operations Management Society (POMS), and Manufacturing and Service Operations Management Society (MSOM). Currently, he serves as Editor-in-Chief for a premier journal Manufacturing & Service Operations Management (M&SOM).

## **Professor Lihui Wang**

**Professor and Chair of Sustainable Manufacturing**

**KTH Royal Institute of Technology, Stockholm, Sweden**

### **Title: Cloud-Enabled Big Data-Driven Adaptive Process Planning for Machining**

**Abstract:** This presentation covers the concept, approach and the latest development of a cloud-enabled and big data-driven process planning system for machining operations. It applies a closed-loop decision-making approach that enables collaborative and adaptive process planning based on real situations for real machines. To better leverage available resources (both hard and soft), a cloud platform is developed with decision modules for resource monitoring, collaborative process planning, setup planning, process simulation and remote machining. Big data is used to facilitate the decision process. On-board optimisation is another challenge of this work. The ultimate goal is to enable process planning anywhere in the cloud, while machining a part somewhere else, in form of cloud-based services.

**About the speaker:** Lihui Wang is a Professor and Chair of Sustainable Manufacturing at KTH Royal Institute of Technology, Stockholm, Sweden. His research interests are focused on distributed process planning, cyber-physical production systems, cloud manufacturing, big data analytics, real-time monitoring and remote control, and human-robot collaborations. Professor Wang is actively engaged in various professional activities. He is the Editor-in-Chief of International Journal of Manufacturing Research, Editor-in-Chief of Robotics and Computer-Integrated Manufacturing, Editor of Journal of Intelligent Manufacturing, and Associate Editor of International Journal of Production Research and Journal of Manufacturing Systems. He has published 8 books and authored in excess of 430 scientific publications. Professor Wang is a Fellow of CIRP, SME and ASME, and a registered Professional Engineer in Canada.

## **Professor Zhen He**

**Professor, College of Management and Economics**

**Chair, Department of Industrial Engineering**

**Tianjin University, P R China**

### **Title: Quality and Innovation: Contradictory or Complementary**

**Abstract:** Today a company will soon die without quality and it cannot survive in long run without innovation. But there are a lot of debates about the relationship between quality and innovation. The presentation highlights the key role of quality and innovation in the economic transformation in China which is in the state of “New Normal”. The research of correlation between quality and innovation and some other research topics are addressed. Empirical studies shows that implementing quality initiatives such as Six Sigma or Lean Six Sigma will improve quality and promote innovation. And a company pursuing innovation may not harm quality. The presentation also discusses the necessity and future o research opportunities as of quality and innovation.

**About the speaker:** Dr. Zhen He is a Changjiang Scholar chair professor in College of Management & Economics, Tianjin University. He is an Academician of International Academy for Quality (IAQ) and the recipient of NSFC (National Natural Science Foundation of China) Outstanding Young Scholar. He received his PhD in Management Science and Engineering from Tianjin University in 2001. As a PI he has conducted nearly 10 NSFC sponsored projects including 3 key projects. His main research interests include quality management and control, Six Sigma and Lean Production with over 100 journal papers and 5 books. ## Travel Tips

### Transportation

Public transport is the best way to get around in Hong Kong. The north side of Hong Kong Island and most of Kowloon are well connected by the MTR, Hong Kong's clean and efficient rapid transit railway system, while the extensive bus system enables you to explore the south side of Hong Kong Island and the New Territories.

### Sightseeing at Victoria Harbour

Victoria Harbour is known for its panoramic night view and skyline, particularly in the direction towards Hong Kong Island where the skyline of skyscrapers is superimposed over the ridges behind. One of the best places to view the harbour is the promenade of Tsim Sha Tsui on the Kowloon side.

## Shopping at Causeway Bay

Causeway Bay or East Point is one of Hong Kong's major shopping districts. It includes the 13-storey Japanese department store Sogo, Times Square, and Hysan Place. Hong Kong is one of the most famous shopping paradises in the world. However, the real shopping heaven of the city should be Causeway Bay. There gathers numerous shopping malls and various boutiques.

## Dining at Lan Kwai Fong

Lan Kwai Fong is one of Hong Kong's most popular nightlife hot spots and home to over 90 restaurants and bars. The atmosphere ranges from stylish wine pairings to raucous jelly shots and the food on offer is as diverse as the clientele. This center of late-night revelry is so renowned that its official street sign is more photographed than many of the celebrities who haunt its clubs. Mostly, the area is crowded with people, eager to shake off the working day or week.

## Bird's Eye View at Victoria Peak

Standing on this highest place of Hong Kong Island, you can enjoy a fantastic bird's eye view of towering skyscrapers, Victoria Harbor and the skyline of the city. In particular, the sunset view of panorama is quite riveting. Several ways can take you to the peak but undoubtedly the best way is to take a classic tram with 100-year history. However, the weather will affect a lot. Sunny days will give you a clearer view.
